

Mounting

The L-Bracket is precision machined and optimized in design for the Phase One 645 camera. It has laser-engraved marks for the lens axis located on the rear of the plate.

The L-Bracket comes with captive-type mounting screws that feature a special, high strength head-to-shank cross section. This plate mounts with a single 3/8"-16 mounting screw.

Your Phase One 645 camera comes with a reducer bushing pre-installed in the camera's 3/8-inch mounting socket; this bushing must be removed before you can install your new L-plate. Use the supplied (#PH0) Phillips screwdriver to remove the screw that fixes this reducer bushing. With the small screw removed, you can use a small coin to unscrew and remove the bushing. Once removed, align the locator pins then insert and tighten the mounting screw with the supplied hex key. The Phase One L-Bracket is designed intentionally without the use of any cork or rubber-type padding.

Direct mating of the camera body and the mounting plate—without any intervening sponginess— improves the mass coupling between the tripod and camera. This assures best vibration damping and enhances rigidity of the system.

As an extra benefit you can always mount other type brackets in the extra mounting screw hole on the bracket.

Vertical Mount

With the Phase One L-Bracket on the camera body you can quickly mount the camera in either horizontal or vertical aspect—directly atop the tripod's apex— avoid gross positioning shifts—and retain best vibration damping at all times. Furthermore the tripod mount will always be perfectly centered to the lens center.

PHASE ONE L-Bracket

Construction: CNC machined aluminum alloy
Dimension: 105 x 80 x 42 mm
Weight: 160g incl. handstrap
Hand Strap: Leather, adjustable
Mounting pos: Vertical /Horizontal
Mount type: Arca Swiss quick release type

Arca Swiss C1 Cube
(not included)

Really Right Stuff
ball head BH-55 with Quick Release
B2 LR II
(not included)

Quick Release

Phase One L-Bracket mounting plate fits in all Arca- Swiss compatible quick-release stand mounting systems.

Compatible tripod heads include original: Arca Swiss Monoball Z series, Monoball P series and Cube series.
Really Right Stuff Tripod heads BH-55 LR, BH-40 LR and Quick Release clamps

Hand Strap

The Phase One L-Bracket features a Cam-dapter Hand Strap System.

Like other camera hand straps, the Cam-dapter Hand Strap System allows you to more easily hold and steady your camera with just one hand.

The Phase One 645 camera fitted with the Phase One L-Bracket and hand strap is therefore easily used both handheld and on a tripod and still allows full access to the camera battery compartment.

After fitting your hand strap to fit your hand, be sure to thread the webbing back through the sliplock (A) and trim to about 2,5 cm (1"). This will lock your strap in place.

The Leather hand strap are finished with a light coating of mink oil. Occasionally you may notice some light hazing or dullness on the leather. A light polishing with a soft cloth will remove this haze and restore the shine of your hand strap.
